- Note 1: Pesticides not listed in the Table, except for those import tolerances developed, shall not be detected.
- Note 2: Both the MRLs (ppm) and the actually examined residues of pesticides are calculated on the basis of the weights of the produces in the forms on market.
- Note 3: The examination of pesticide residues shall include the pesticide itself and its metabolites.
- Note 4: The MRLs of dithiocarbamates are determined as mg CS₂/kg and refer to the total residues arising from use of any or each of the groups of dithiocarbamates:
1. Dimethyldithiocarbamates resulting from the use of ziram, metiram, or sankel.
 2. Ethylenebis(dithiocarbamate)s resulting from the use of mancozeb, maneb, propineb, zinc-mancozeb, or cufraneb.
 3. The use of ETM or thiram.
- Note 5: MRLs cover carbendazim residues occurring as a metabolic product of benomyl or thiophanate-methyl, or from direct use of carbendazim.
- Note 6: Pesticides listed in the Appendix Table 1 are highly safe, it is not necessary to set the MRLs and examine their residues.
- Note 7: No residue shall be detected for the pesticides prohibited for use by the agriculture authority, unless other regulations apply. The names of such pesticides are listed in the Appendix Table 2.
- Note 8: The classification of crops are listed in the Appendix Table 3.
